JESSE ADESINA

jesseoluwapelumi01@gmail.com | LinkedIn | GitHub | +447481242038 | London, UK

EDUCATION

Middlesex University, London **Sep 2025 — Jun 2026**
BSc Information Technology & Business Information Systems (Top-Up) — **First Class**

- **Relevant Coursework:** Agile Software Development, Data Modelling

Aptech Computer Education **Aug 2022 — Jul 2024**
Advanced Diploma in Software Engineering — **Distinction**

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems (Linux Fundamentals), Databases

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript
Frameworks & Libraries: Django, Django REST Framework, Node.js, Express, React, Next.js
Databases & Storage: PostgreSQL, Prisma (ORM), IndexedDB
Cloud & Developer Tools: Docker, Git, GitHub Actions, Google Cloud Platform (GCP), Postman
Testing Frameworks: Jest, Vitest
APIs & Authentication: REST APIs, OIDC, PKCE, Gemini API, Google Drive API

EXPERIENCE

Hanoled (Remote) **Jun 2026 — Present**
Software Engineer

- Built an offline-capable CBT exam system using PWA and IndexedDB, preserving candidate answers during network outages and synchronizing them without duplicate submissions within a 48-hour recovery window.
- Architected a central PostgreSQL-backed data platform across 2 products, unifying student, staff, subscription, assessment, and grading records while retiring 14 redundant tables and preventing duplicate or inconsistent records.
- Implemented OIDC/PKCE-based secure sign-on and data synchronization across Node.js 3 services, enforcing school-specific access controls and automatically recovering failed updates without disrupting other services.

Kavod Engineering Services, USA (Remote) **Mar 2025 — May 2025**
Software Engineer Intern

- Built the company's web platform using Next.js and automated consultation workflows with Google Apps Script, capturing enquiries, storing lead data, and triggering user and admin email notifications.
- Prototyped a Go-based video processing system for a proprietary LMS platform, automatically preparing videos at multiple quality levels for reliable playback across different network conditions.

PROJECTS

AI Goal & Task Planning System

- Built an AI planning system using Django REST Framework that converts open-ended goals into SMART goals and calendar-ready tasks with structured due dates, turning vague ambitions into actionable plans.
- Engineered a human-in-the-loop workflow requiring user approval before AI-proposed goal and task changes are applied, keeping users in control as plans evolve.
- Designed a PostgreSQL-backed, versioned plan storage with atomic transactions and revision snapshots, preventing partial or outdated updates while enabling rollbacks.

Direct-to-Cloud File Collection Platform

- Built a secure file-collection platform with Next.js that lets people receive large photos and videos directly in their cloud storage without requiring senders to create accounts.
- Designed a provider-agnostic upload architecture that sends file data directly from the sender's browser to cloud storage, reducing application-server bandwidth and storage costs.
- Implemented resumable uploads with PostgreSQL-backed state tracking, automatic retries, concurrent transfers, secure upload links, and confirmed file delivery for unreliable mobile connections.
